ELEVEN LABEL CHANGES IN SEVEN DAYS · THE 180H RECORD RUN IS CLOSED

BTC · +2.9% THIS WEEK
THE AMBER BLIP IS ALWAYS BITCOIN

Bitcoin took the wheel back. Four labels later.

Our Regime Board changed its label eleven times in seven days, closed the 180 hour record run it was tracking, and settled on BTC Dominant on Thursday afternoon. Inside: the flips, the jobs print, four entries the gate refused that would have lost 12 to 15 percent, and five resolved receipts, the three losses first.

01

YOUR WEEK IN 60 SECONDS

THE WEEK · 31 AUG TO 6 SEP 2026

The board could not pick a lane. Then it did.

Monday alone printed five label changes. Wednesday went risk off for 33 hours, Thursday flipped to Chop and then to BTC Dominant inside four hours, and bitcoin closed the week up 2.9% with an 8% range in between. When the board is that busy the right number of new calls is small, and the ledger says exactly that.

+2.9%	11	68H	2W 3L
BTC, 7 DAYS	ACCEPTED LABEL CHANGES	BTC DOMINANT, STILL OPEN	RESOLVED RECEIPTS

IF YOU REMEMBER ONE THING

Eleven label changes is not a signal, it is a warning. Most of them were sub hour blips while the dollar and the stock market argued inside their bands. The only labels that held long enough to trade around were **Alt Risk Off** on Wednesday and **BTC Dominant** from Thursday. Under BTC Dominant our CORE lane is switched off by design, so no new call has fired since Thursday 08:09 UTC.

WHAT LINED UP

- The record BTC Dominant run closed at 180.0 hours, 40 minutes after Issue 002 froze. The hand off went to Rally on the dollar axis, the exact axis and label the flip map had named the day before.
- The gate declined four entries this week under BTC Dominant. Every one of them would have lost between 12.5 and 15.3 percent at the four hour mark.
- BTR hit its target in 44 minutes for +13.2% net, the one clean win in a two win, three loss week.

WHERE TO STAY SHARP

- The nearest flip is SPX to Chop: 0.403% of its 20 day average away, less than one typical day (0.481%). It is frozen until the US cash close on Tuesday 8 September, because Monday is Labor Day.
- Saturday's breadth burst (69 of 83 liquid perps up, median +3.2%) came on half of Friday's turnover. Breadth on thin liquidity is the cheapest breadth to print.
- Friday's jobs print took 5.5% out of bitcoin open interest on a 2.0% price drop. The book moved three times as fast as the price.

02

THE REGIME BOARD · WHOSE MARKET IS IT

LIVE AT SENTINELRESEARCH.APP/TOOLS/REGIME-BOARD

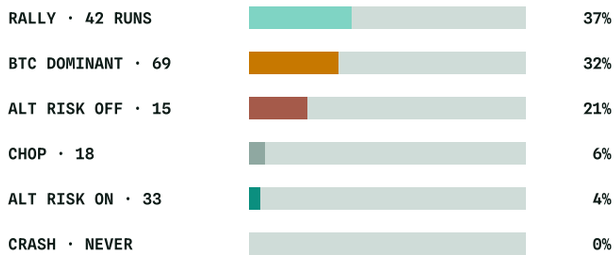

Four labels in seven days, and what each one meant.

The board reads the stock market (SPX), the dollar (DXY), bitcoin dominance (BTC.D, bitcoin's share of all crypto) and the fear index (VIX), then prints one of six labels every hour. This week it used four of them. The accepted log is below, blip by blip, next to the whole record.

LABEL	FROM (UTC)	TO	HOURS
Rally	Mon 31 00:00	Mon 31 08:00	8.0h
Chop	Mon 31 08:00	Mon 31 08:18	0.3h
Rally	Mon 31 08:18	Mon 31 13:38	5.3h
Alt Risk Off	Mon 31 13:38	Mon 31 15:51	2.2h
Chop	Mon 31 15:51	Tue 01 04:00	12.1h
Alt Risk Off	Tue 01 04:00	Tue 01 05:20	1.3h
Chop	Tue 01 05:20	Tue 01 05:31	0.2h
Alt Risk Off	Tue 01 05:31	Tue 01 05:47	0.3h
Chop	Tue 01 05:47	Wed 02 01:52	20.1h
Alt Risk Off	Wed 02 01:52	Thu 03 11:30	33.6h
Chop	Thu 03 11:30	Thu 03 15:22	3.9h
BTC Dominant	Thu 03 15:22	open	67.8h

SIX LABELS · SHARE OF 3,114 HOURS SINCE 29 APRIL

Median dwell: BTC Dominant 1.6h, Rally 3.5h, Alt Risk Off 2.2h, Chop 0.8h, Alt Risk On 0.6h. The log folds flips shorter than ten minutes, so the counts are not like for like with Issue 002's 157 runs.

AXIS	LIVE VS REFERENCE	MARGIN	DISTANCE TO THE NEXT FLIP	STATE
DXY	99.16 vs MA20 99.39	-0.237% of MA	0.537% to Rally	down, banded
SPX	7,718.6 vs MA20 7,710.65	+0.103% of MA	0.403% to Chop · typical day 0.481%	up, banded, frozen to Tue
BTC.D	59.18% vs MA50 57.45	+1.73 pts	1.83 pts to Alt Risk On	up, banded
VIX	14.53	calm under 18	13.47 pts to stress = Crash	calm

// Eleven changes, four labels, one that held. The board was not indecisive, the inputs were. When the dollar and the S&P sit inside their bands the label can only flip on tiny margins, and it flags every one of those hours as a tie.

AUTHORITY THIS WEEK: 125 FRESH · 16 WITHIN BAND TIE · 8 CONTESTED, OF 149 HOURLY POINTS · ALT RISK ON: 0 HOURS

[I] FROZEN 6 SEP 11:40 UTC

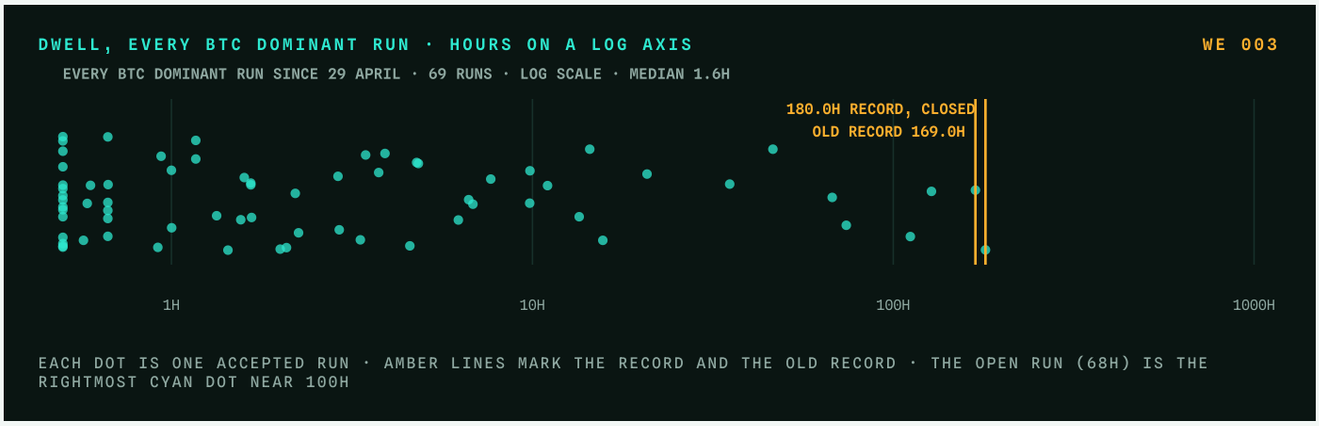

03

THE RECORD RUN · HOW IT ENDED

THE RECORD · BTC DOMINANT 17 AUG 15:00 UTC TO 25 AUG 03:00 UTC

The record run ended 40 minutes after we froze.

Issue 002 printed the run at 178.6 hours and still open. The board's own log closes it at 180.0 hours, at 03:00 UTC on 25 August, into a twelve minute Chop blip. The label re latched, bitcoin led the board for three more days, and on 28 August at 15:48 UTC the dollar axis handed the label to Rally.

180.0H	169.0H	46.4H	68H
THE RECORD, CLOSED 25 AUG	OLD RECORD, 5 TO 12 MAY	LAST BTC LED STRETCH, 26 TO 28 AUG	THIS WEEK'S RUN, OPEN

How it ended. At 03:00 UTC on 25 August the board flipped to Chop for twelve minutes, then back to BTC Dominant for 20.8 hours. Three more Chop blips on 26 August, none longer than 65 minutes, then a 46.4 hour BTC Dominant run that ended when the dollar broke above its 20 day average band and the label became Rally. The previous day's flip map had named DXY as the nearest axis and Rally as the label. It was right on both.

If you fold the blips. Treating the four short Chop blips as noise, bitcoin led the board from 17 August 15:00 UTC to 28 August 15:48 UTC, 264.8 hours. The board's fold rule is ten minutes, so its record stays 180.0 hours. We print the log's number, not the friendlier one.

This week's run. BTC Dominant from Thursday 15:22 UTC survived Friday's jobs print (bitcoin –2.0%, dominance 1.79 points over its 50 day average) and Saturday's alt breadth burst, because dominance rose 0.13 points that day while ETH, XRP and SOL lagged bitcoin. At the freeze it is 68 hours old, with 92.7% of its first 110 hourly samples reading fresh and 542 of 542 fresh over the 48 hours to Saturday's cutoff.

> WHERE TO STAY SHARP
>
> A record is a fact about the past. The board does not know how long the current run will last, and neither do we. What it does know is the distance to the next flip: SPX is 0.403% from Chop, less than one typical day, and it cannot move until the US cash close on Tuesday.

04

TREND FLIP SCANNER · THE COHORT GRADED

LIVE AT SENTINELRESEARCH.APP/TOOLS/TREND-FLIP-SCANNER

The 73 flip cohort, one weekly close later.

Issue 002 promised the first graded evidence from the 73 weekly bull flips that arrived after a 22% move. At the Monday 31 August close, 54 of the cells still in our top 150 universe were holding the flip, 16 flipped bear, and 7 more flipped bull. Follow through, mostly, with a sixth of the cohort already reversed.

54	16	60.3%	47 / 5
WEEKLY CELLS HOLDING THE 24 AUG FLIP	FLIPPED BEAR AT THE 31 AUG CLOSE	WEEKLY BREADTH · 88 BULL, 58 BEAR	FULL BULL / FULL BEAR ALIGNMENTS

WHAT LINED UP

- ETH and SOL are full bull on all four timeframes. Both 4h cells flipped bull at 16:00 UTC on Thursday, the rally candle.
- Breadth leans bull on every timeframe: 4h 66%, 12h 79%, daily 67%, weekly 60% of cells.
- BTC's weekly cell sits 7.8% above its line after one bar. Its daily cell has been bull since 20 August.

WHERE TO STAY SHARP

- BTC's 4h cell flipped bear at 16:00 UTC on Friday, the jobs print candle, 2.3% under its line. Three of four timeframes are still bull, so the alignment reads lean bull, not full.
- Bare flips did not survive costs out of sample in our own testing. The board says it on the page: trend state is context, not a trade signal.
- The 54 holding cells face their second grade at the Monday 7 September close, after this issue froze. We will print it either way.

// Bare flips did not survive costs out of sample. Losing leg share stays 58 to 68 percent across every config. Selection is where the measured edge lives.

THE BOARD'S OWN EVIDENCE NOTE · 24,960 BACKTESTS, 26 PERPS, JUDGED OUT OF SAMPLE

[I] FROZEN 6 SEP 11:40 UTC

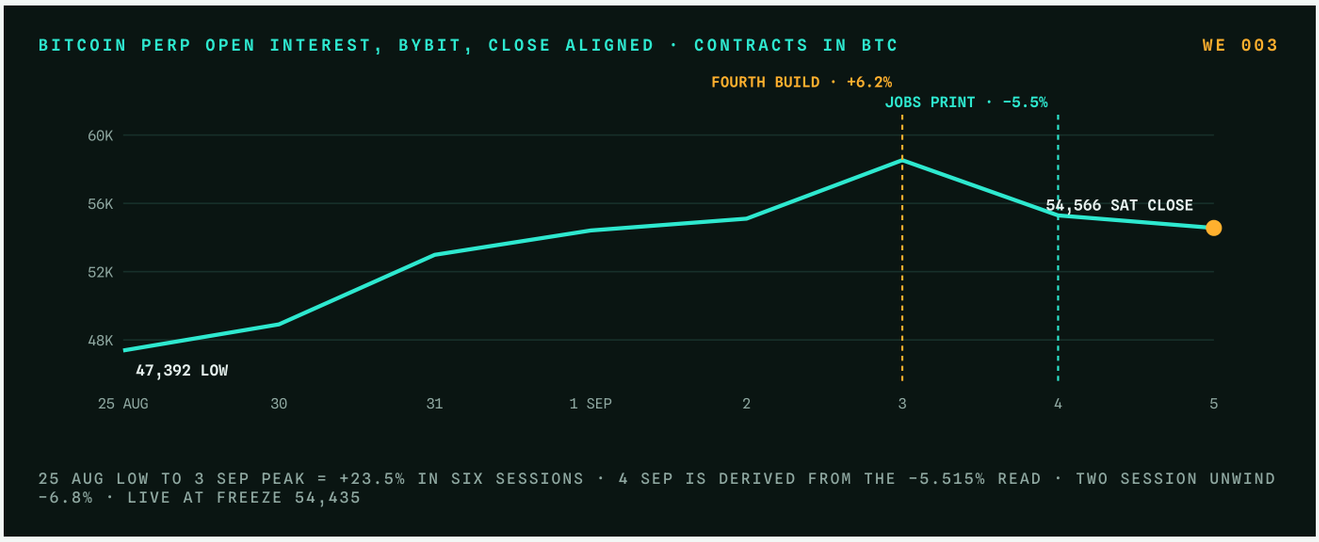

05

RESEARCH DESK · WHAT THE LANE FOUND

THE DAILY INTELLIGENCE LANE · SIX REPORTS, ONE PER MARKET DAY

A jobs print, thin breadth, and one idea we killed.

Every market day an automated research run reads the tape, our own logs and the public receipts, and a second run reviews and files it. This week it caught a dollar and stocks shock, a bitcoin book that unwound three times faster than price, and a correlation effect that turned out to be the measuring window.

01 **The jobs print, Friday 12:30 UTC.** US payrolls came in at +162,000 against a consensus near +56,000 (press figures, not receipts). Bitcoin printed the week's largest hourly turnover, $1.23 billion in the 12:00 UTC candle, and closed the day −2.0%. Open interest fell 5.5%. On the same venue, at the same close, tokenised equities finished +5.5% median while crypto finished −1.9% median: a 7.4 point gap on one exchange, one close.

02 **Saturday's breadth burst.** 69 of 83 liquid perps closed up, median +3.2%, with ARB +34%, SUSHI +34% and UNI +14%, on venue turnover of $6.9 billion, down 54% from Friday. Dominance still rose 0.13 points, because the bid sat in mid and small caps while ETH, XRP and SOL lagged bitcoin.

03 **The dispersion artefact, refuted.** For six sessions "low correlation coins outperform" looked real: same window rank correlation −0.39 on Saturday, t of −3.8. Measured on the prior week's correlation it vanished, −0.02 with a t of −0.2. The pumps themselves lowered the measured correlation. The hypothesis is closed and no identically shaped test will be proposed again.

04 **The weekend dissent that was not a bug.** Last weekend the TradingView producer read a 24/5 S&P CFD that saw Sunday's risk off, while our cash feed sat frozen at Friday's close. The two margins disagreed by more than the band, so the board failed closed and suppressed entries until the US cash open on Monday. The owner's decision: keep it that way through September.

The boundary. These are our own research runs reading public data. Third party figures (payroll consensus, liquidations, ETF flows) are press sourced and labelled as such. None of it is a forecast.

[I] FROZEN 6 SEP 11:40 UTC

06

TOOLS SHIPPED · AND THE FUNNEL

PRODUCT · WHAT WENT LIVE 31 AUG TO 6 SEP

A council rebuilt Edge. A sweep rebuilt the dashboard.

Shipped this week: SENTINEL Edge v2.0.0 on TradingView after a 40 voter model council, the Regime Switchboard and the Evidence Desk, a free daily brief page, and a dashboard sweep that fixed a dozen bugs on phones. Two more sweeps are merged and waiting for the Wednesday release window.

01 **SENTINEL Edge v2.0.0 on TradingView, free.** A seven lens design review, then a 40 voter model council (20 Claude, 20 GPT) decided nine of eleven open questions. One firing change: it stands down on 4 hour charts and above by default. Plots cut from 54 to 34. Still free, and a free script still prints no edge numbers.

02 **Regime Switchboard.** The regime board page rebuilt around flip proximity: a five minute pulse store with 14 days of history, a public pulse history endpoint, and the gate's receipts on the page.

03 **Evidence Desk.** The root dashboard rebuilt tape first: one masthead replaces six strips, the wallet gate never opens by itself, mobile cards with a thumb dock.

04 **SENTINEL Daily.** A free daily brief page at /daily composed from the research lane, with a public endpoint for the rows behind it.

05 **Dashboard sweep, 4 September.** The phone dock is rendered in CSS and cannot overflow, the page is one scroller on phones, an "observed Xs ago" freshness line, a BTC benchmark pin, tap to reveal definitions, and a dozen sort, filter and alert bugs fixed.

06 **Merged, live on Wednesday 9 September.** A site wide sweep (a 47 pixel sideways scroll on phones, "undefined" text on five pages, dead skip links on sixteen) and a Telegram bot sweep (members were told to connect a wallet on /start, six commands deleted, every reply a card). We froze deploys over the US holiday on purpose.

THE FUNNEL, MEASURED

Trial starts in the last 30 days: **0**. Subscribers: 6, of which 2 active, one of those a comped research seat. X followers 250, down 2 on the week; 26 posts, 772 impressions, 18 engagements. We print this every issue so the receipts cut both ways. The tape first gate went live on 1 September and has produced no trial yet; the Wednesday release changes the first screen a member sees, and that number is what we watch next.

FREE FOREVER

The live label, the full regime history, the public receipt ledger and every issue of this report.

07

MEMECOIN WEATHER · PUMP.FUN

PUMP.FUN RADAR · SENTINELRESEARCH.APP/TOOLS/PUMP-FUN-ALPHA-RADAR

Weather went back to Collecting. Here is why we say so.

Issue 002 froze the Memecoin Weather label at Selective. This week it reads Collecting with low confidence: the tracked cohort is still accruing follow through evidence since the 4 September restart, and our paid holder data provider suspended our key for the rest of its billing cycle. We would rather print a weak label than a confident one we cannot back.

COLLECTING

CONFIDENCE LOW

GENERATED 6 SEP 11:24 UTC

Driver on the label: tracked cohort follow through above the trailing baseline. Issue 002 read SELECTIVE with launch pace normal and bonding pace normal. The regression reason is not a public field yet; when the track record is public, the reason will be too.

+4.7%
SOL, 7 DAYS · 101.7 TO 106.5

−18.8%
SOL PERP OI FROM ITS 28 AUG PEAK

12,000
WALLETS GRADED PER DAILY PASS · 45% OF 26,636

0 / 197
BIRDEYE CALLS SINCE 4 SEP · SUSPENDED TO 18 SEP

WHAT WE CAN SAY

- SOL rose 4.7% while its perp open interest fell 18.8% from the 28 August peak and funding flipped from negative to slightly positive: the cleanest "long side cleared" shape on the board.
- The Operator Graph grades 12,000 wallets a day out of a 26,636 wallet cohort, 45% coverage with the cap binding, on our own Postgres spine of 4.9 million pump.fun events.
- PUMPFUN itself fell 9.4% on Saturday, the weakest large turnover name that day, and is down 24% over seven.

WHAT WE CANNOT SAY

- Launch, graduation and rug counts are member only surfaces this week and are not in this issue.
- Deep holder verification, the paid check behind "holder truth", is off until the provider resets on 18 September or the account is upgraded. The radar says so on the page.
- Why the label regressed. We will print the reason when the track record is public.

THE BOUNDARY

Memecoin Weather is an observational market conditions classification built from recorded public on chain and provider data and SENTINEL's own resolved research cohort. Labels describe measured conditions, not predictions or probabilities of profit. Nothing here is an execution instruction or personalised financial advice. SENTINEL never executes trades.

[I] FROZEN 6 SEP 11:40 UTC

08

RECEIPTS · LOSS FIRST

THE LEDGER · SENTINELRESEARCH.APP/PERFORMANCE

Five receipts. The three losses first.

Our CORE lane fired five calls this week and every one of them resolved inside its four hour cap. Three lost, two won, and one of the wins hit its target in 44 minutes. Nothing has fired since Thursday 08:09 UTC because BTC Dominant switches this lane off by design.

2W 3L FIVE RESOLVED · 31 AUG TO 6 SEP

SCAN/5 · 4H CAP · NET OF 0.22% COST

Every row is a sweet lane call registered on the public ledger before it resolved and graded mechanically against persisted prices. Delivery to subscribers is a separate receipt, and three delivery checks from this window are still unresolved on our side, so we say registered, not delivered.

SIGNAL	RESOLVED OUTCOME	RESULT	NOTE
BEAT	−4.07%	LOSS	Wed 13:33 UTC. Time expired four hours later, never reached target or stop. The week's worst.
POL	−1.62%	LOSS	Tue 11:44 UTC. Time expired. The second POL call of the day, and the one that lost.
GRAM	−0.79%	LOSS	Mon 22:04 UTC. Time expired. The week's smallest miss.
POL	+1.25%	WIN	Tue 01:03 UTC. Time expired above entry.
BTR	+13.21%	WIN	Thu 08:09 UTC. Target hit in 44 minutes, the last call before the gate closed the lane.

Trailing 14 days adds one. BEAT, Sunday 30 August, stopped out at −5.45% after 47 minutes. Two wins and four losses over the fortnight, average net +0.42%, and the median receipt is a loss. That is the honest shape of a small sample.

WHAT THE GATE REFUSED THIS WEEK · ALL UNDER BTC DOMINANT

DECLINED ENTRY	LANE	WHEN	FIXED +4H COUNTERFACTUAL
MAGMA	sweet	Fri 08:05 UTC	−15.30%
MAGMA	sweet	Fri 09:20 UTC	−14.63%
TRIA	sweet	Fri 10:12 UTC	−14.61%
TRIA	super	Fri 10:03 UTC	−12.51%

THE BOUNDARY

Fixed +4h counterfactuals of entries the regime gate declined. Cohort statistics only: declined and delivered entries are different selections, so no saved or missed delta is claimed. Negative numbers mean the declined entries would have lost; a positive run prints here too. Resolved signal outcomes are not exchange fills, not customer profit and loss, and five outcomes is a small sample.

[I] FROZEN 6 SEP 11:40 UTC

09

THE PLAYBOOK · SCORED FIRST, THEN RENEWED

Issue 002's five, graded. Then five more.

Last issue we named five things to watch. One resolved, one partly, two did not happen and one got worse. We print the score before the new list, because a watch list nobody grades is just a horoscope.

VERDICT	ISSUE 002 SAID WATCH	WHAT HAPPENED
RESOLVED	**The record run: extend or hand off?**	Ended 40 minutes after the freeze at 180.0 hours. Bitcoin led the board until 28 August, then the dollar axis handed the label to Rally.
NO	**The rotation tell: Alt Risk On while dominance falls?**	Never printed. Alt Risk On had 0 hours this week; dominance sits 1.73 points over its 50 day average. Saturday's alt burst happened with dominance rising.
PARTIAL	**The 73 weekly flips: follow through or trap?**	One weekly close graded. 54 cells holding, 16 flipped bear, 7 new bull flips. The second grade lands at the Monday 7 September close.
NO	**Memecoin Weather: Selective upgrades to Risk On?**	It regressed to Collecting, low confidence. Page 07.
NO	**Holder truth: deep verification back on live mints?**	Worse. The provider suspended the key; nothing paid reads until 18 September or an upgrade.

FIVE THINGS WE ARE WATCHING NEXT · ALL DATED, ALL FALSIFIABLE

01 **SPX to Chop.** The S&P sits 0.103% above its 20 day average and 0.403% from the Chop flip, less than one typical day (0.481%). It is frozen until the US cash close on Tuesday 8 September. If it flips, sweet stays denied and the majors only rule changes to a chop rule.

02 **Bitcoin open interest.** The book unwound 6.8% in two sessions from the 3 September peak of 58,532.6 contracts. Back at or above that peak by the 8 September close with price at or below 79,795.3 would falsify the "bought, then unwound" read.

03 **The Monday 7 September weekly close.** Do the 54 holding weekly bull cells survive a second bar? And does Saturday's breadth survive real liquidity: a cohort positive share under 50% on Monday with venue turnover back above $12 billion kills it.

04 **Wednesday's release.** The site sweep and the Telegram sweep go live on 9 September, the first deploy after the holiday freeze. The number we watch is trial starts, currently 0 in 30 days.

05 **Memecoin Weather leaving Collecting.** And the provider reset on 18 September at 23:43 UTC, or an account upgrade before it. Until then the radar runs on free data only, and says so.

Issue 004 lands 14 September. Issue 003 was promised for 1 September and slipped a week. We would rather say so than pretend the calendar moved.

Resolved signal outcomes, not exchange fills. Research only; no trade execution.
